

A Software-Driven Security Environment

BLUESCAPE: FOR SITUATIONAL AWARENESS AND PLANNING

Security doesn't just happen—it demands planning and coordination. Real-time information sharing. Situational awareness. The involvement of all stakeholders. And trusted data protection.

Armed with knowledge from all sources, event managers and security teams gain a decision advantage—one that translates to optimal outcomes. And Bluescape makes it happen.

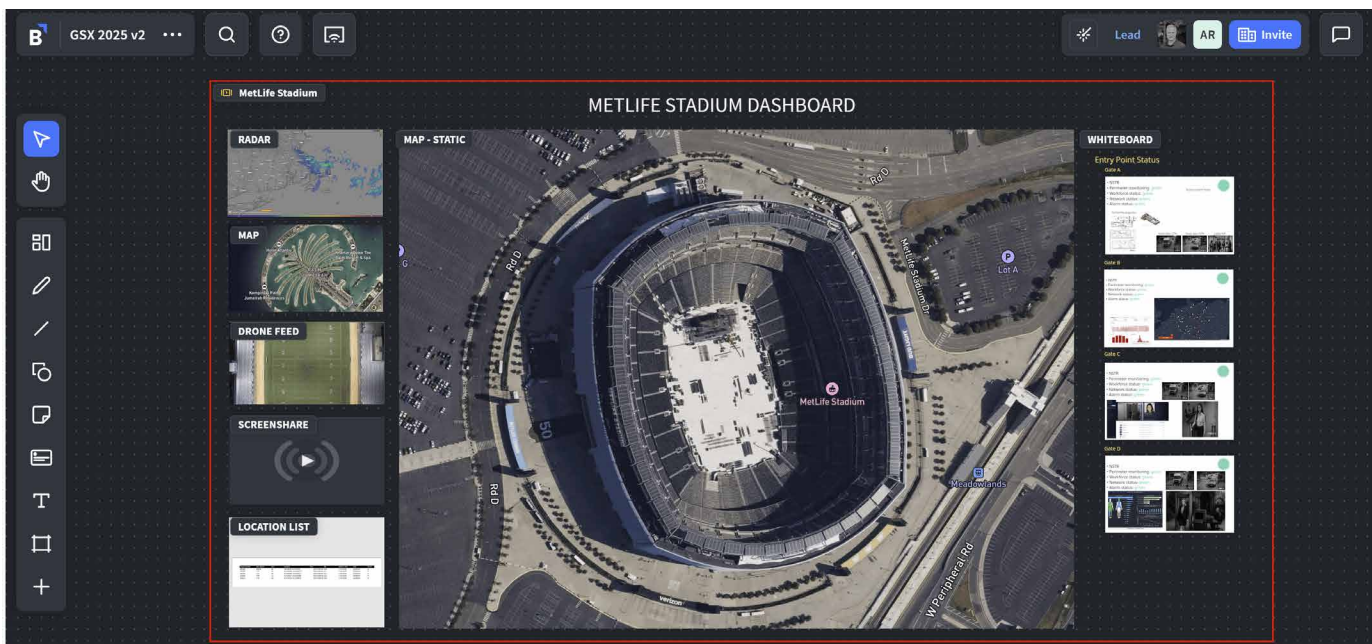

THE BLUESCAPE PLATFORM

Bluescape is a virtual operations environment that enables unmatched speed and coordination for public safety and event security. It eliminates the “place problem,” bringing data, people, and apps together to create a common operating picture that can be used for planning, situational awareness, real-time coordination, and after-event reviews.

Think of Bluescape as the digital version of an ops center whiteboard—with advanced capabilities to fuse data and intelligence—creating a common operating picture for everyone involved. It's a persistent, unconstrained workspace for corporate security needs, from information sharing and personnel coordination to safety monitoring and incident response.

BLUESCAPE BENEFITS

- View and act on real-time information from multiple sources
- Protect information fidelity, including hi-res images and video feeds
- Interact with other tools, apps, and integrations with a robust API
- Produce decision-support products and actionable plans
- Adjust to rapidly changing and complex situations
- Control access to information
- Protect data and plans with advanced, military-grade information security

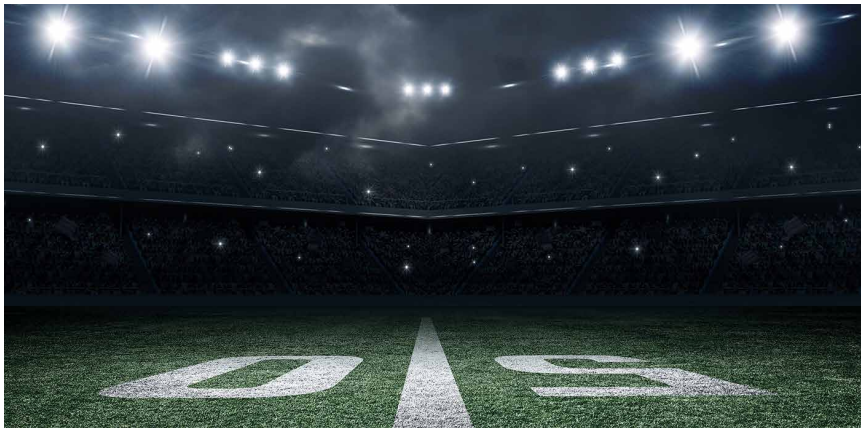

STAND UP A VIRTUAL OPS CENTER WITH SOFTWARE

Managing corporate security requires centralized operations and coordination between all stakeholders.

Sharing information and establishing plans with outside groups, including first responders, law enforcement, municipalities, utilities, and even local hospitals, can be challenging due to a lack of secure, shared communications. Until now.

Bluescape provides a secure, single pane of glass to view and act on real-time information from multiple sources and gather all stakeholders. Teams can drag and drop images, videos, data streams, and documents into the Bluescape workspace. Leaders can organize everything with pre-configured templates and create dashboards for rapid decision-making. In moments, a common operating picture takes shape—providing the shared consciousness needed for security success.

Bluescape doesn't require new hardware. It's a shareable SaaS feed that fits on your current A/V hardware and can be projected out.

SECURITY OPS USE CASES

Bluescape lets you bring stakeholders together in a secure space for coordinated corporate public safety and event security operations.

- Monitoring facilities, participants, and personnel
- Sharing maps, architectural diagrams, rally and evacuation points, utility locations, and mobility and transportation routes.
- Threat modeling
- Compliance requirements and exercises
- Emergency response
- Crisis-team management
- Internal and external communications
- Creating detailed action plans and workflow

MILITARY-GRADE SECURITY

- Authorized to operate at FedRAMP Moderate+ and by the DoD at IL4 for CUI data
- Deploy on-premises, air-gapped, or in the cloud
- Complies with NIST CSF, NIST 800-171, and SOC 2 type II
- End-to-End Encryption (Data in transit and at rest)
- Role-Based Access Control (RBAC) with full audit trail
