

A catalyst for intelligence teams

Accelerating mission responsiveness

CHOOSE BLUESCAPE FOR INTELLIGENCE OPERATIONS

- Built for information sharing, visual planning, and data analysis
- Tracking assets and persons of interest
- Situational awareness and rapid response coordination
- Operational planning
- Supports Agile methodologies for continuous development and speed
- Integrates with tools of choice, third-party platforms, and AI/ML solutions, including the ability to employ tools and data feeds directly in the workspace
- Easily scale deployments up or down across physical, virtual, and hybrid operations centers
- A hyper-scalable workspace for large data sets and large analyst groups

MISSION-READY SECURITY

- Trusted by federal agencies
- Authority to Operate at the Top Secret Level
- Complies with NIST CSF, NIST 800-171, FIPS 140-2, and ISO 27001
- Authority to operate in the U.S. DoD: NAVSEA ATO at IL4/IL5 for CUI and DISA ATO and Support for ITAR
- Fully FedRAMP Moderate certified and DISA IL-4 certified

Operating in an environment of increasingly complex, dynamic, and interconnected circumstances, US intelligence organizations find themselves at an inflection point. Technology has vastly increased the knowledge and data available for their mission work while, at the same time, the pace of operations has intensified. Success demands agility.

The prerequisite for operational coordination is the secure exchange of information with other team members and agencies. While gathering in person is impractical or impossible, intelligence teams need a common operating picture, collaboration, and informed decision-making as if all parties were together. And that's where Bluescape shines.

Bluescape addresses common challenges:

- Collaboration and planning among geographically dispersed teams
- Secure and timely information sharing
- Situational awareness
- Real-time responsiveness to emerging situations
- Visualization of multiple and disparate data streams, formats, and analysis
- Connectivity and access to information beyond meetings

Bluescape is a catalyst for mission responsiveness, giving intelligence teams the virtual workspace needed to generate ideas, make decisions, and solve problems.

Cross-functional and dispersed teams can work like they're in the same room—integrating situational awareness and analysis into real-time workflows.

Team members can interact and share content seamlessly. Bluescape's persistent, secure workspace eliminates information gaps, miscommunications, and delays.

Streamline workflows and incorporate data repositories with a flexible and extensible API, easy-to-use interface, and a wide variety of tools and templates.

The Bluescape platform creates a centralized system for managing and leveraging mission knowledge, content, and data.

BLUESCAPE ENHANCES INTELLIGENCE OPERATIONS

The Bluescape platform creates a centralized space to visualize and leverage mission knowledge, content, and data.

NEXT-LEVEL AGILITY

- Secure access anytime, anywhere
- Visualize workflows, tasks, and processes with drawing and diagramming tools
- Align teams for planning and coordinating work on projects, sprints, or development

Interoperability is the cornerstone of effective operations centers, analysis cells, and planning cells. Bluescape’s digital experience accelerates productivity and scales mission-critical agility while eliminating the expense and logistics of organizing remote people and assets.

Whiteboarding, diagramming tools, and searches enable teams to visualize threats and resources with point-and-click simplicity. Our template library supports everything from sprint planning and retrospectives to operational planning and real-time situational awareness.

UNPRECEDENTED VISIBILITY

- See the big picture or dive into details, powering faster, smarter decision-making
- Mission-critical information sharing
- Real-time and asynchronous collaboration to support 24/7/365 global missions

Operations centers can’t manage what they don’t see—making mission success daunting.

Without a common operating picture, distributed personnel struggle to activate complete data sets into intelligence for informed decisions.

Bluescape APIs enable operations centers to call up data from any environment, pulling information from across teams into a single view so organizations can better understand, organize, and put their data to work. Teams can easily consolidate their fused intelligence from multiple sources to create one source of truth.

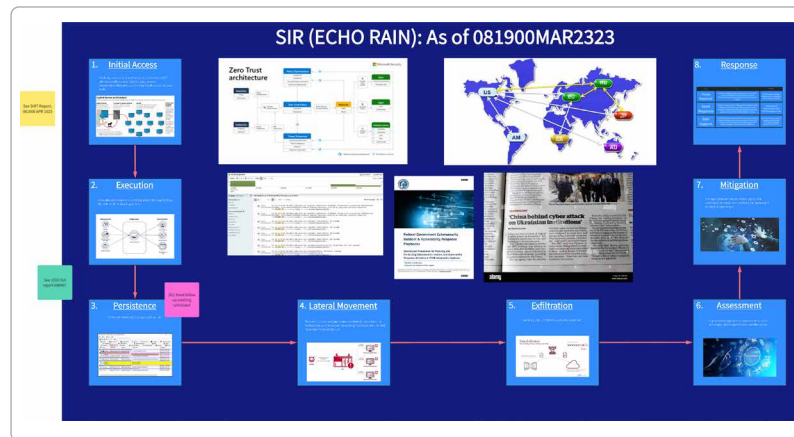

DATA ON DEMAND

- View and analyze information in a visual, interactive environment
- Bring data to the moments and places where it can have the most impact
- Integrate Bluescape with preferred applications to analyze, create, and combine
- Derive more value from AI/ML, identify data and performance drift, and bring quality inference into workflows

Bluescape helps teams visualize information in context and create actionable decision-support products. With searchable and more reliable data, teams can optimize real-time situational awareness, visualize threats, identify resources, render better decisions, and formulate responses—all with unparalleled speed and security.

SECURITY BUILT FOR THE UNIQUE NEEDS OF THE INTELLIGENCE COMMUNITY

Bluescape has achieved an elite security designation: DoD Impact Level 5 (IL5). This unique authorization builds on the Top-Secret, Level B certification and air gapped deployments, making Bluescape the only virtual workspace solution hardened for intelligence use.

BLUESCAPE MAKES IT SIMPLE FOR TEAMS TO ACCESS, SHARE, AND COLLABORATE—BRINGING DATA, TOOLS, AND PEOPLE TOGETHER IN A SECURE DIGITAL SPACE.
